

## SQL | Subqueries exercise | List the events which happened after the last international one

(<https://www.wiseowl.co.uk/sql/exercises/standard/subqueries/4132/>)

Create a query which lists out all of the events in the **tblEvent** table which happened after the last one for country 21 (**International**) took place. Here's the gist of what you need to do:

```
select e.EventName, e.EventDate, c.CountryName
from [dbo].[tblEvent] as e
inner join [dbo].[tblCountry] as c
on e.CountryID = c.CountryID
where e.EventDate >
      (select TOP(1) EventDate from [dbo].[tblEvent]
where CountryID = 21
order by EventDate DESC)
```

Results		Messages	
	EventName	EventDate	CountryName
1	Brexit vote	2016-06-23	United Kingdom
2	Donald Trump elected	2016-11-08	United States
3	Karate included in Olympics	2016-06-01	Switzerland
4	Comic-Con conference	2016-05-27	United Kingdom
