SQL | Subqueries exercise | Using sub queries to filter with aggregates

(https://www.wiseowl.co.uk/sql/exercises/standard/subqueries/4227/)

Write a sub query to filter events to show only those which have an event name of longer than average length. You will need the **AVG** and **LEN** functions to do this.

```sql
select EventName from [dbo].[tblEvent]
where len(EventName) >
        (select AVG(len(EventName)) from [dbo].[tblEvent]
        )
```

	EventName
1	The UK declares war on Germany
2	Liberation of Bergen-Belsen
3	Last edition of "Top of the Pops"
4	First Harry Potter Book published
5	Teletubbies first broadcast
6	Monty Python first broadcast
7	Fawlty Towers first broadcast
8	Argentina invades the Falklands
9	First episode of Coronation Street
10	The Lord of the Rings published
11	First edition of Desert Island Discs
12	Women vote for the first time
13	Captain Oates leaves his tent for the last time
14	Theory of relativity published
15	Manchester Ship Canal opens
16	Preston North End win first league
17	Alice in Wonderland published
